

Improved Formulation starting with Batch 322

The universal Tampa® Plus TPL convinces with versatile use and easy processing. By replacing a raw material, it was possible to optimize the performance of the colour shade TPL 489.

The formula change resulted in a significantly improved printability of TPL 489 and is also evident from the better flow properties of the ink in the can (the addition of thinner may have to be adjusted depending on the application).

The old and new formulations can be mixed and overprinted as desired. The strengths of this ink system - the processing as well as the gloss level, ink flow, and resistance of the dried ink film - remain the same.

For further information on Tampa® Plus TPL please refer to www.marabu-inks.com.

Date of Change-over

This change becomes effective starting with **batch 322**. (week 22/2023).

You will find an additional remark on the can stating:

“Attention: Improved Formula”
